

Scheduling - finalizing when they wanna practice putting in information for the real show

Discussed that we should do a practice run so that we can see how the clients enter data and then design our workflow around that.

Going over requirements

Went through divisions classification, decided on limit

Editing classes, combos info, divisions info

Discussed that we need to change the "Bill a Rider" page

Basically, we want to have a select drop down for Riders in general (in the show)

After selecting a rider, it should show a page showing how much that rider owes for each combo they participated in

Make the class num alphanumeric (to allow for nums like 7A or 6B)

There should be a button on the class page that allows you to print out a page that shows a list of HRCS that are participating in that class. Each list entry includes the combo num, rider, and the horse. The list is sorted by ascending combo num (combo nums increase as you go down the page)

Don't need to change the validation for the Horse/Size (good!)

Need to change the num field for the class form to include the alphanumeric field

There should be a button on the show page that prints out a report (only shows riders that are 4H members):

- 1) County 1
  - a) RiderLastName, RiderFirstName, Horse1, Horse2, ...
  - b) RiderLastName, RiderFirstName, Horse1, Horse2, ...
  - c) ...
- 2) County 2
  - a) Same thing as above
